

## Key Fact Sheet: NBN Fixed Wireless

### INFORMATION ON SPEED TIERS

A speed tier is a theoretical maximum speed that is available during off-peak periods. The actual speed that you experience may be less, especially during busy periods. Please use our website to check your address and establish if these speeds are available to you.

Details of the typical speeds you can expect and a recommendation of suitable plan for your usage can be found in the table below:

Fixed Wireless Plus Speed Tier	
Plan Name	Fixed Wireless Plus
Typical Peak Time Speed (7pm - 11pm)	27Mbps
Typical Off-Peak Speed (11pm - 7pm)	20-70Mbps
Suitable for:	1-4 users streaming music, HD video and web browsing at the same time.

### INFORMATION ON FIXED WIRELESS SPEEDS

NBN services provided using Fixed Wireless technology may not be capable of supporting the highest available speed tiers. Fixed Wireless Plus offers a theoretical maximum speed of 75/10. It is not possible for us to determine precisely the maximum speed that you will be able to achieve until your service is connected.

#### **OTHER FACTORS THAT CAN AFFECT SPEED**

Several factors at your premises that may affect your internet speed. This includes your modem/router configuration, internal cabling and sockets, the number of users using the internet, the software and hardware connected to your NBN, the signal strength or obstruction of the antenna's line of site to the tower, weather conditions, tower and network capacity. Wi-Fi performance is often affected by the position of your Wi-Fi device, thickness of walls and other electronic devices that may interfere with your Wi-Fi signal. See our article: <https://www.more.com.au/help-and-faqs> for more information and tips on things you can do to reduce the impact of these factors.

#### **TECHNICAL LIMITATIONS DURING POWER OUTAGE**

More does not provide a battery backup in case of a power outage at your property. This means in the event of a power outage you will not be able to use the NBN service or make/receive phone calls (including emergency phone calls) using a telephone service that runs over the NBN. Any back to base alarm or medical alarm connected to the NBN will also cease to work. We recommend ensuring that a mobile phone is always charged and within coverage in case you need to make emergency calls.

#### **REQUIREMENTS OF MEDICAL AND SECURITY ALARMS**

It is important to determine whether any medical or security alarms are compatible on the NBN before ordering an NBN service with More. If your alarm service is not compatible with NBN you should consult with your alarm provider for an alternative way for your alarm to operate over the NBN.
